

1. What is the primary function of a router in a computer network?

- a) Assigning IP addresses to devices
- b) Providing wireless connectivity to devices
- c) Forwarding data packets between networks
- d) Managing user authentication and access control

Answer – c) Forwarding data packets between networks

2. What is the purpose of DHCP (Dynamic Host Configuration Protocol) in a computer network?

- a) Assigning static IP addresses to devices
- b) Resolving domain names to IP addresses
- c) Managing network traffic and congestion
- d) Dynamically assigning IP addresses to devices

Answer - d) Dynamically assigning IP addresses to devices

3. Which network device operates at Layer 2 (Data Link Layer) of the OSI model and forwards data packets based on MAC addresses?

- a) Router
- b) Switch
- c) Hub
- d) Repeater

Answer - b) Switch

4. Which network topology connects all devices in a linear fashion, with each device connected to a central cable or backbone?

- a) Star
- b) Bus
- c) Ring
- d) Mesh

Answer - b) Bus

True or False: A VLAN (Virtual Local Area Network) allows network administrators to logically segment a single physical network into multiple virtual networks, each with its own broadcast domain.

Answer - True

True or False: TCP (Transmission Control Protocol) is a connectionless protocol that provides reliable, ordered, and error-checked delivery of data packets over a network.

Answer – False

True or False: A firewall is a hardware or software-based security system that monitors and controls incoming and outgoing network traffic based on predetermined security rules.

Answer - True

8. Describe the steps involved in setting up a wireless network for a small office or home office (SOHO) environment.

Answer -

10. Discuss the importance of network documentation in the context of building and managing networks.
