

Module 8: Network Access - Assignment

1. Explain Switch

A switch is a network device that connects devices within a LAN and uses MAC addresses to forward data to the correct destination. It is an intelligent device.

2. Explain Switch Boot Sequence

The switch boot sequence includes:

- 1) POST (Power On Self Test)
- 2) Loading the boot loader
- 3) Loading IOS
- 4) Loading startup configuration

3. Explain Three Methods to access Switch Command Line Interface

The three methods to access the CLI of a switch are:

- 1) Console access: Direct physical connection.
- 2) Telnet/SSH: Remote access via IP network.
- 3) AUX port

4. Explain and Configuring the Cisco Internet Operating System

- Use 'configure terminal' to enter global configuration mode
- Set hostname, enable passwords, configure interfaces and routing as required.

5. Explain Switch Port

A switch port is a physical interface on a switch where end devices (PCs, printers, etc.) are connected. Each port operates on Layer 2 and traffic based on MAC addresses.

6. Router Neighbor Relationship Question
